Software Piracy in the Arab Region – Status, Impact and the Way Ahead

*Mansour Farah
Consultant on ICT for Development*

Content

1. Status of software piracy at the global and regional levels
2. Economic impact of software piracy and benefits of reducing it
3. Two cases: Egypt and Qatar
4. The way ahead: What Governments ought to do to reduce software piracy

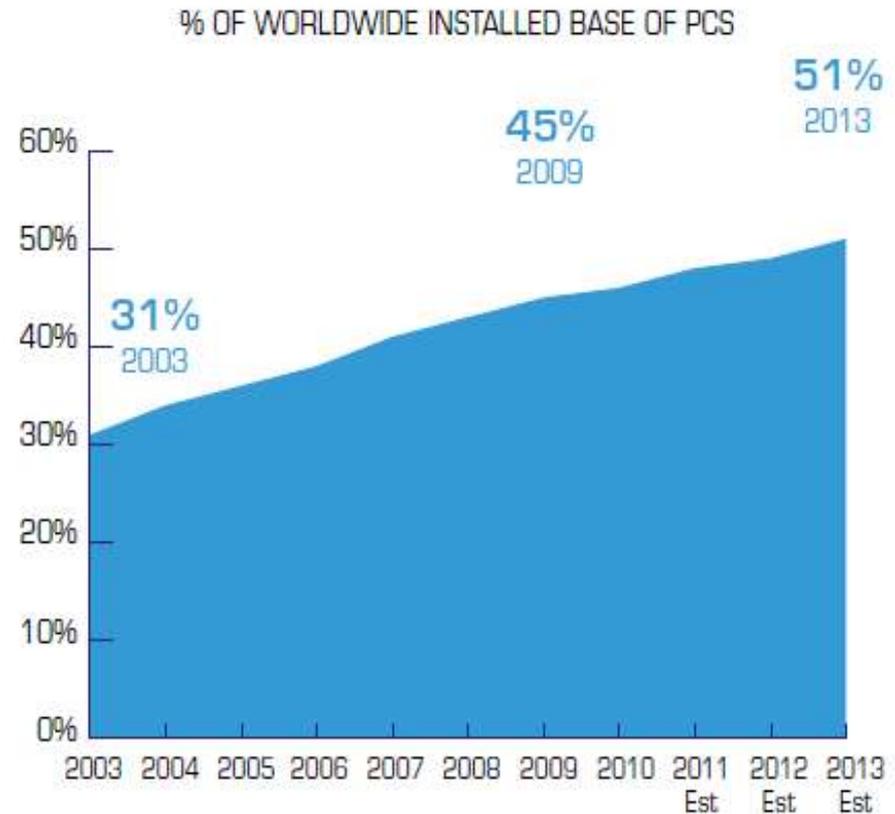

STATUS OF SOFTWARE PIRACY AT THE GLOBAL AND REGIONAL LEVELS

What is Software Piracy?

- Software piracy (SP) is the illegal use and/or distribution of software protected under intellectual property laws (Business Software Alliance - BSA)
- SP could be intentional or unintentional, carried out by an individual or an institution
- SP increases with the increase in the number of PCs in developing countries, particularly emerging economies
- SP is higher on old PCs than on newly installed PCs and is more frequent on consumer PCs than on institutional PCs
- Cloud computing and software-as-a-service (SaaS) have currently little effect on SP, but this may change with the increase in volume

Emerging* market growth

- Increase of number of PCs is becoming higher in developing countries where markets are growing

* ALL COUNTRIES EXCEPT AUS, NZ, JP, US, CAN, AND WESTERN EUROPE

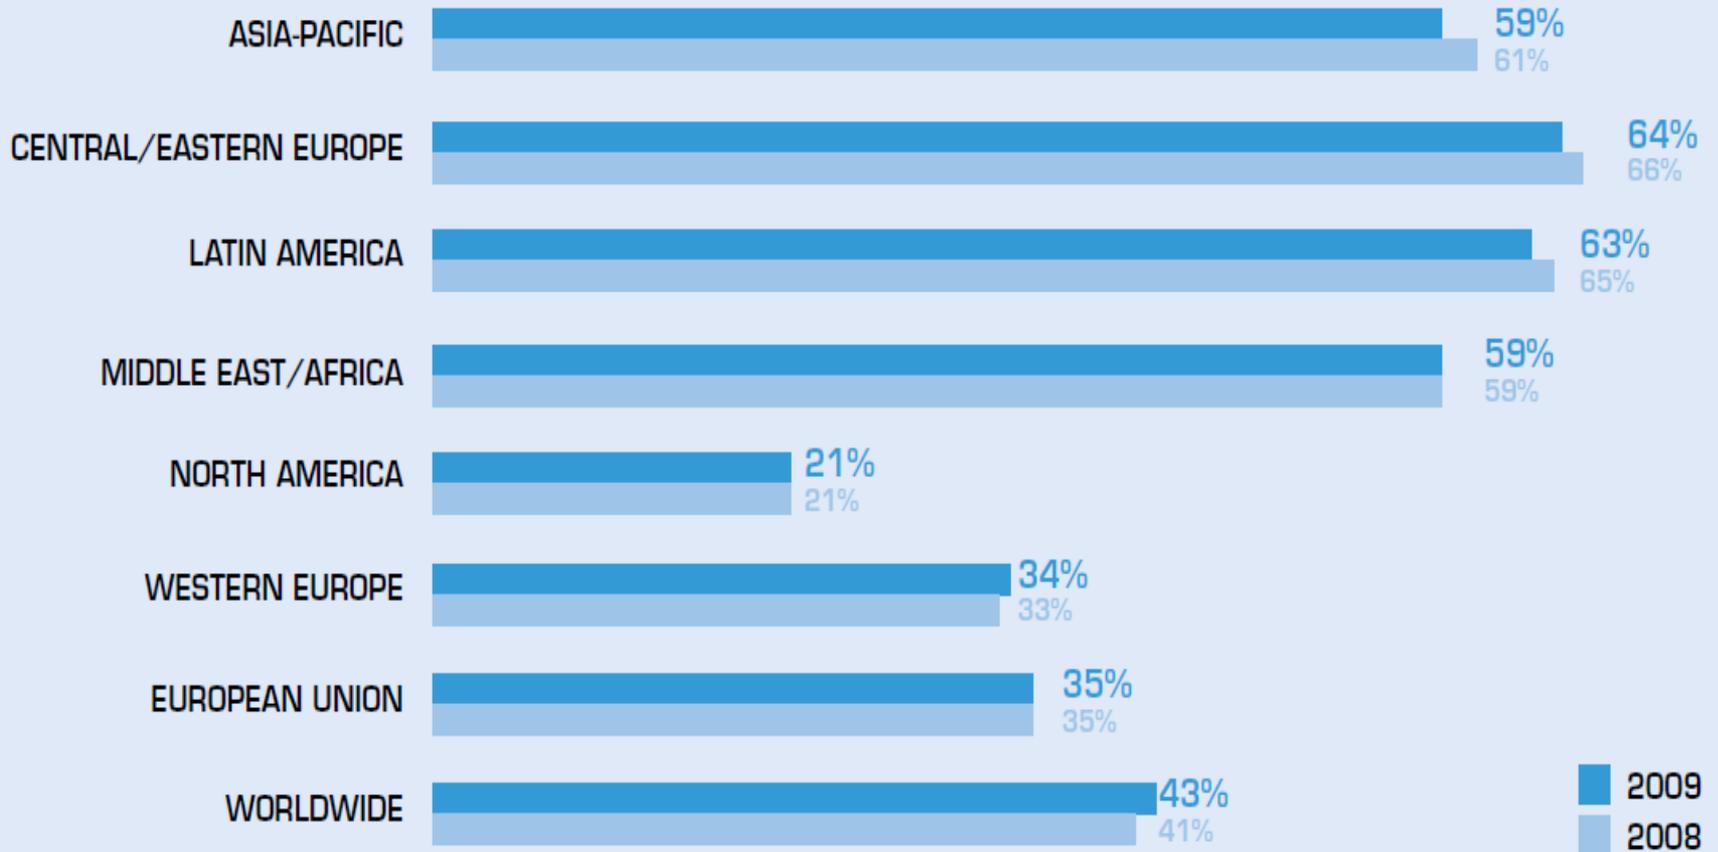

SOURCE: SEVENTH ANNUAL BSA/IDC GLOBAL SOFTWARE PIRACY STUDY, MAY 2010

Some global statistics for 2009*

- Unlicensed PC software use dropped in 49% of the economies studied, stayed the same in 34% and rose in 17%
- The global piracy rate increased from 41% in 2008 to 43% in 2009
- The value of unlicensed software hit \$51.4 billion, a 3% decrease from 2008
- Economies with the lowest software piracy rates remain the United States, with a piracy rate of 20%, and Japan and Luxembourg, both with a piracy rate of 21%
- Economies with the highest piracy rates include Georgia, Bangladesh, Zimbabwe and Moldova, each with a rate above 90%

ECONOMIC IMPACT OF SOFTWARE PIRACY AND BENEFITS OF REDUCING IT

Economic impact of software piracy

- Local software companies can be crippled by competition from unlicensed and stolen software in the market, not to mention piracy of their own products
- Local service and distribution firms can make more money working with legitimate software and cut internal support costs
- Businesses and consumers waste time and money working with faulty and unsupported pirated software
- For users, using pirated software entails legal risks and security risks

Efforts to reduce piracy on the part of software developers

- Legalization efforts by software manufacturers to provide governments with software at a low cost in bulk to replace unlicensed software
- Continuing agreements with original equipment manufacturers (OEMs) to preload software onto hardware systems before they ship
- Employing technical advances, like digital rights management, that encourage customer self-audits
- Offering exclusive, value added services
- Promulgating software asset management programs, with the prospect of delivering user savings
- Encouraging government education and enforcement activity that supports respect for IPR laws
- Continuing government and industry partnerships in anti-piracy programs

Impact of reducing software piracy

- Economic benefits of lowering piracy — in terms of additional jobs, new local revenues and additional taxes generated are real:
 - Russia added nearly 60,000 jobs by 2008, 9,000 of which IDC attributes to lower PC software piracy
 - By 2008, China added more than 800,000 jobs to its IT industry, of which IDC attributes 220,000 to lower PC software piracy

Economic benefits of reducing piracy (1)

Distribution of economic gains from reducing PC software piracy by 10 percentage points in four years in selected Middle East countries

	2009 Piracy Rate	Total Impact (\$M)	Local Share (\$M)	Local/Total
Egypt	59%	\$254	\$161	64%
Jordan	57%	\$52	\$44	83%
Saudi Arabia	51%	\$786	\$535	68%
UAE	36%	\$425	\$275	65%
Turkey	63%	\$783	\$611	78%
Israel	33%	\$799	\$677	85%
Subtotal	46%	\$4,343	\$3,149	73%

Economic benefits of reducing piracy (2)

Distribution of local economic gains from reducing PC software piracy by 10 percentage points over 2 to 4 years

		10-pt Reduction	10 pts in First 2 of 4 yrs (\$M)		10 pts Spread Over 4 yrs (\$M)		Rapid-Reduction Dividend, 2 yrs v 4 yrs	
	2009 Piracy Rate	New Jobs	Added GDP	Extra Taxes	Added GDP	Extra Taxes	Added GDP	Extra Taxes
Egypt	59%	1,978	\$338	\$44	\$254	\$33	33%	34%
Jordan	57%	375	\$71	\$19	\$52	\$14	35%	34%
Saudi Arabia	51%	1,420	\$1,041	\$25	\$786	\$19	32%	33%
UAE	36%	841	\$566	\$23	\$425	\$17	33%	31%
Turkey	63%	2,180	\$1,041	\$205	\$783	\$154	33%	33%
Israel	33%	3,207	\$1,079	\$582	\$799	\$430	35%	35%
Subtotal	46%	11,651	\$5,806	\$1,076	\$4,343	\$799	34%	34%

Source: BSA and IDC, 2010 Piracy Impact Study: the economic Benefits of reducing software piracy

Important lesson

*The faster the reduction in piracy,
the greater the economic impact*

TWO CASES: EGYPT AND QATAR

The case of Egypt (1)*

- The Egyptian ICT sector managed in the last few years to gain the attention of domestic as well as foreign investors due to its tremendous success.
- Value-added services and call centers were established with revenues of these companies increasing by 15% to reach EGP12 10.48 billion compared to EGP 9.11 billion in 2007.
- 175,1 000 employees worked in the ICT sector in 2008 compared to 162.5 thousand employees in 2007, hence employment grew by 7.77%.
- The Egyptian software industry, part of the larger Information and Telecommunication (ICT) sector, is one of the fastest-growing and most vibrant segments of the region, with an annual growth rate of 25.5%

* *Nora El-Bialy, The Role of Institutions within the IPR Enforcement Context – The Case of de facto Software Protection in Egypt*

The case of Egypt (2)

- SP remains a critical issue, though lots of effort and trials done by the government
- Losses due to software piracy in Egypt estimated by BSA are \$131 million (in 2008).
- 10 percentage point reduction in software piracy over the next four years in Egypt would create more than 1,700 jobs, \$153 million in local industry revenues and \$8 million
- Law 38 of 1992 emerged as an extension of the first IPR law and its amendments included for the first time innovative technology
- Few enforcement actions were taken against large and medium-sized resellers and end-users, which resulted in non-deterrent remedies since Imposed fines (between 1000 and 5000 EP) were totally inadequate to deter piracy
- Egypt reactivated raids on resellers in 1997 and in 1998; they also started raids on business end-users
- Finally, in June 2002, the Egyptian government issued its new IPR law 82 of 2002 that provides a firm basis for protecting copyright materials, including digital environment

The case of Egypt (3)

- The Department of Anti-piracy Police, affiliated to the Ministry of Interior ,and the Censorship Unit, affiliated to the Ministry of Culture formed together the main copyright enforcement pool of the Egyptian government, confiscating the pirated products and arresting offending individuals
- The sharp decline in Egypt's piracy rate happened immediately during enacting its new IPR law and because of signing several agreements with Microsoft to bring the prices of legitimate products closer to those of the pirated ones for specific target groups
- The government and BSA have worked together on launching comprehensive educational campaigns to reduce piracy: BSA carried a comprehensive awareness campaign using several media and continuously tries to build new strong relations with public officials and police authorities to influence the enforcement process; the government appealed to the public and business owners to adopt proper guidelines for using legal products and remind them of the legal liabilities and high cost of piracy.
- These factors increased public awareness concerning pirated software: Users are now aware of the true danger of pirated software on the micro- and macro-levels).

The case of Qatar (1)

- A strong implementation of Qatari law and proactive collaboration between the Ministries of Justice and Interior have borne good fruits in combating software piracy in the country
- Although the rate of software piracy has climbed globally, the rate is quite low in Qatar and the Gulf region compared to other parts of the world
- Software piracy rate for 2009 in Qatar was 51 percent, a significant decline from 60 percent in 2005

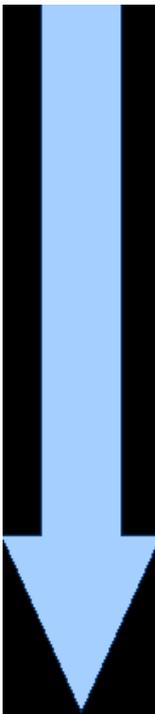

The case of Qatar (2)

- Government control over piracy is apparent, despite the expansion of businesses in Qatar due to the fast-paced progress it is currently witnessing
- Data from Intellectual Property Protection Centre (IPPC) of the Ministry of Justice indicate that a total of 416 arrests on software piracy from 2000 to 2010 and QR15m worth of confiscated items in the same period
- IPPC was set up two years ago to register design, trademark and intellectual property rights, create public awareness and conduct raids with a view to preventing all kinds of software piracy and violation of trademark rights in the country
- Emphasis was put on the importance of curbing software piracy to protect the country's status as one of the Middle East's most IT-enabled states
- There is still a need to generate more awareness on the negative social and economic effects of piracy among resellers and end-users

**THE WAY AHEAD: WHAT GOVERNMENTS
NEED TO DO TO REDUCE SOFTWARE
PIRACY**

IDC Roadmap to Reduce Software Piracy

Governments need to:

Legislate: Establish a clear and consistent legal framework

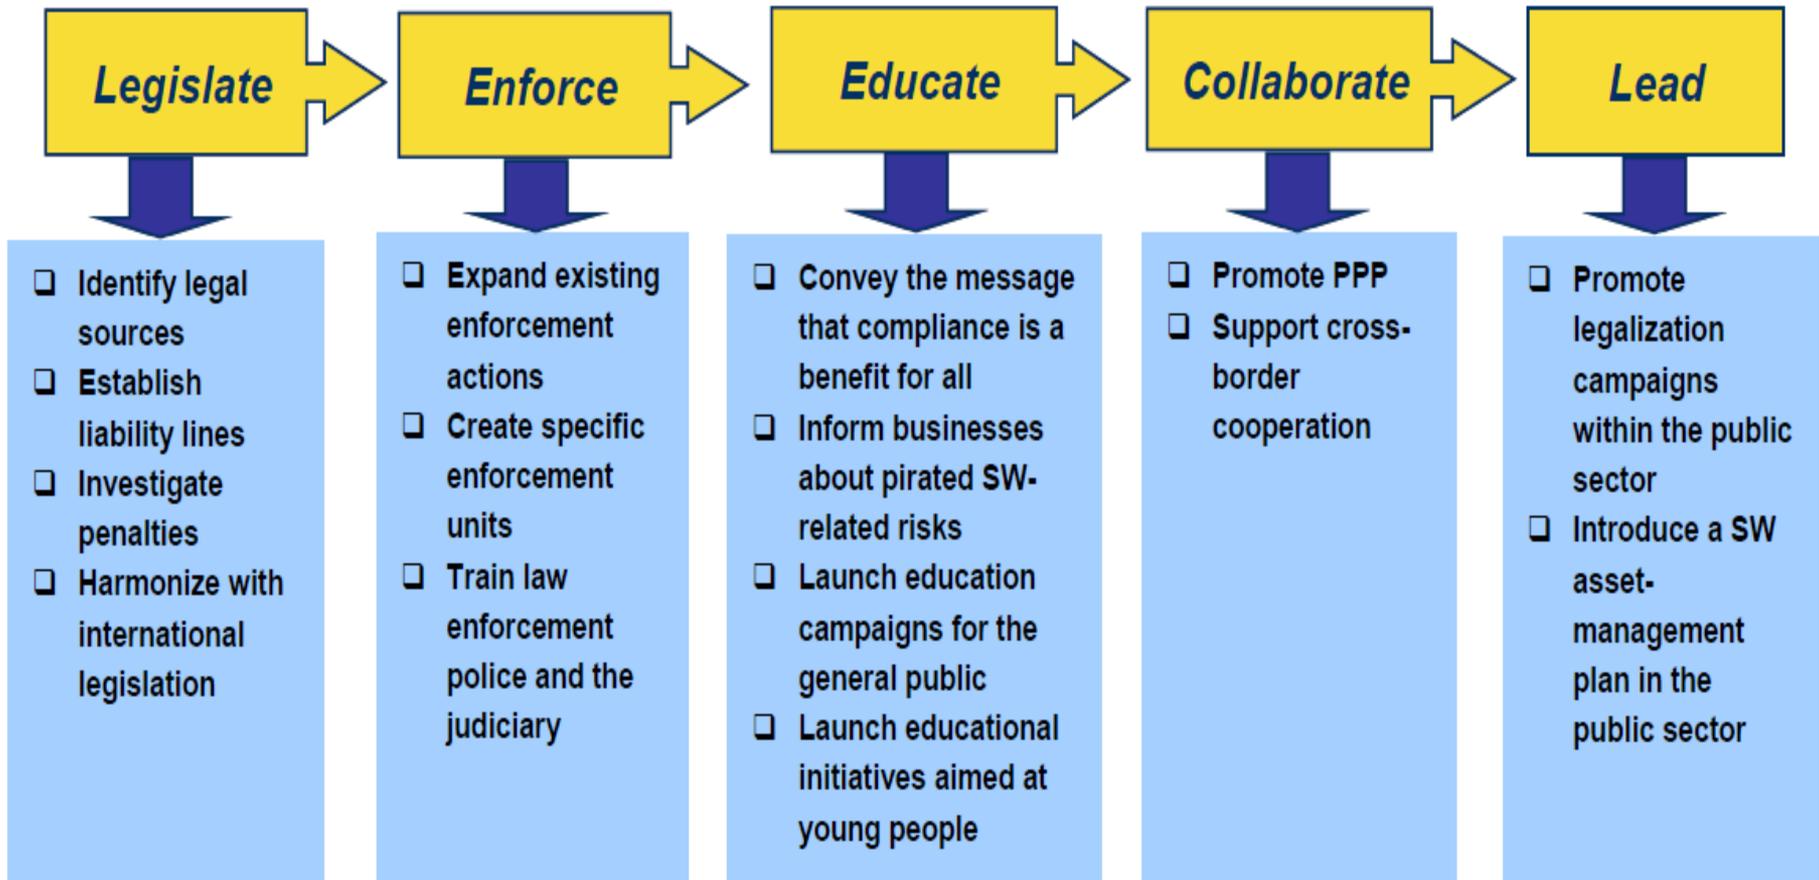

Enforce: Apply legislation with dedicated resources

Educate: Increase public education and awareness

Collaborate: Cooperate at domestic and international level

Lead: Show the way by direct example

Detailed IDC roadmap to reduce software piracy

Thank you!
